

Hopper Broom

★ Bi-directional broom operates in forward or reverse

★ Ideal for milling, material pickup, and road maintenance

★ Rubber skirt keeps dust and debris contained

The EDGE Hopper Broom is an ideal attachment for jobsite cleanup and road maintenance. It is a cost effective investment for rental houses as well. The combination poly and wire brush efficiently picks up dust, debris and milled material leaving a clean surface behind.

Features of the Hopper Broom include a heavy rubber skirt that keeps material contained within the shroud. A single motor is directly coupled to the brush, eliminating problems associated with chains and sprockets. The brush turns in forward or reverse for added versatility. There is no caster wheel, so the EDGE Hopper Broom effectively cleans next to curbs, fences and other obstacles.
